

LANDFILL GAS OPERATIONS

The huge volumes of gases generated and released by landfill sites has always been regarded as a major environmental problem but is currently recognised as an opportunity in the search for ways to generate 'green energy'.

The company is closely associated with projects to maximise the benefits of landfill gas utilisation in Gauteng where flaring and power generation projects are already in full operation.

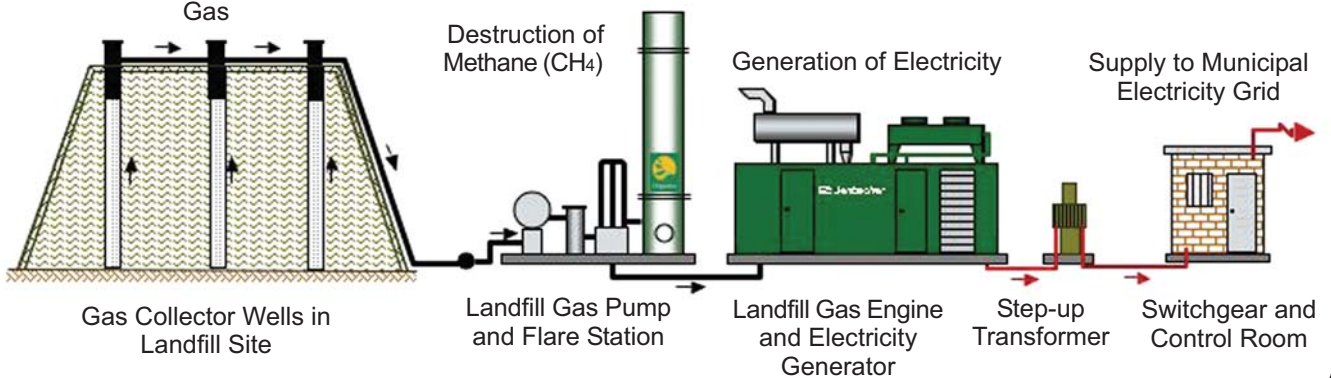

Implementation of its turnkey services assist landfill owners to take advantage of benefits accrued from the carbon credit trading system.

It is estimated that up to 6% of South Africa's renewable energy target could be met using these technologies in the future.

The company is confident that its involvement in sustainable development projects such as these is in line with its socially responsible philosophy of waste reutilisation.
