

# LANDFILL MANAGEMENT

The core business of the landfill division is the management of landfill operations countrywide. Strict administrative procedures, operational controls and regulatory compliance are necessary to ensure that every facility operates at maximum safety and efficiency levels.

At the entrance and weighbridge the company ensures that every aspect of operation complies with both short and long term objectives. Accurate record keeping on a daily basis ensures no negative impact on the long term viability of the site.

These records also ensure that clients are billed correctly for the volumes of waste that they dispose of onto the site. Vehicle loads are checked to ensure that no hazardous materials are brought onto general waste sites, and, when such materials are brought onto sites permitted for hazardous disposal, they are sampled and laboratory tested to ensure full compliance.

The daily deposition of waste is controlled according to a detailed plan that was formulated when the site was designed. Spotters direct vehicles to specific areas designated for that days disposal. At the end of each day these areas are compacted and covered to protect the environment. Management and staff continually ensure the safety of clients and visitors, and protect neighbouring areas from nuisance factors such as dust, flies, vermin and offensive odours.

For further information on our wide range of products and services or for details on our operational centres throughout southern Africa please contact Head Office.
