

LIQUID WASTE MANAGEMENT

Interwaste currently utilise a wide variety of liquid waste management vehicles. Various types of equipment are available for the safe and efficient collection, transportation and disposal of hazardous and non-hazardous liquid wastes. Specialised equipment in the form of Super Suckers, with tank capacity's from 6-15kl, is used for the vacuuming of otherwise inaccessible materials from shop floors, sumps and silo's etc.

The transportation of high volume liquid waste is also available utilising vehicles with maximum carrying capacities of up to 30kl.

Interwaste also manage various liquid waste treatments plants. These are either owned by the company or operated on behalf of its' clients, meeting legislative standards and furthering our stated goal of utilising landfill as an absolute last-resort solution.

Interwaste use combination cleaners for the collection of powder, solid and sludge type wastes. The units have tank capacities of up to 12 000 litres and are capable of suction over a distance of 300 metres, from a maximum depth of 50 metres.

Vehicles are completely self sufficient on-site and available for hire in any location throughout southern Africa.

Ideally the machines are used for emergencies, clean-ups and spillages of any wastes ranging from sewage to sand and stone.

For further information on our wide range of products and services or for details on our operational centres throughout southern Africa please contact Head Office.
