

METALS RECYCLING

From depots across the country Interwaste is active in the collection and processing of all ferrous and non-ferrous metal wastes. Utilising supply from the formal and informal sectors the company in turn supplies bulk users in the local and export market. Although keen to promote local community initiatives the company maintains strict standards and controls to ensure that no stock entering its depots could have been sourced illegally.

Utilising its range of modern machinery, the company is able to offer its clients an efficient mobile baling service. The service best suits generators of large volumes of sub (lightweight) recyclable materials such as car bodies. Generators located far from recycling centres can also benefit through more efficient transport utilisation.

Interwaste also offer clients compact baling machines which are leased and operated at the clients premises. This can save valuable storage space on-site and maximises the value of the recyclables to the client as transport costs are optimised.

With over 300 bins of all shapes and sizes at its disposal, Interwaste is able to offer its clients an efficient waste metal collection service. A bin, or bins are placed at client's premises at no charge. When full of recyclable metal the bins are uplifted to the nearest depot where the load is weighed at SABS approved weighbridge facilities. Bins can be collected either on request or on a pre-arranged schedule.

For further information on our wide range of products and services or for details on our operational centres throughout southern Africa please contact Head Office.
