

ANCILLIARY SERVICES

Bio-remediation

Bio-remediation is an extremely effective in-situ method of detoxifying the environment. In contrast to bio-degradation, which is the natural degradation of matter in the environment, bio-remediation is brought about by human intervention in actively stimulating the process. This involves harnessing microbial metabolism to convert toxic hydrocarbons into their harmless components of CO₂ and water. It is a particularly efficient means of detoxifying large tracts of hydrocarbon

contaminated soils such as railway shunting yards and is considered to be a cost effective method of dealing with pollution problems in remote, inaccessible areas.

Training

Training covering all aspects of effective waste management and waste handling is available to all Interwaste clients.

In addition, specialist Hazmat training up to 1st Respondent and Incident Commander level is available. This will allow clients to effectively contain any spillages prior to the arrival of the Hazmat incident response team.

Audit Services & Risk Assessment

Interwaste has an in-house SHEQ department whose main function is to ensure company compliance with legislated as well as self imposed standards such as ISO 9000, ISO 14000 and ISO 18000. These services can also be made available to our clients, assisting with compliance issues and the identification of potential risk areas whether of an environmental or health and safety nature.

On-Site Services

Efficient communication means efficient operation. Interwaste On-Site Services include the provision of qualified site supervisors to facilitate immediate and on-going contact between the client and the company. Also, On-Site Service personnel are employed to ensure that all waste is separated correctly prior to being disposed of into containers. This reduces overall disposal costs through the reduction of cross contamination between hazardous and non-hazardous waste types.

For further information on our wide range of products and services or for details on our operational centres throughout southern Africa please contact Head Office.
