

HAZMAT SPILL KITS & ABSORBANTS

Ever more stringent environmental and OHS regulations make the immediate availability of comprehensive spill kits for transporters and employers a must. Hazmat 1 spill kits from Interwaste are designed to allow the customer, in the event of a hazardous spill incident, to execute immediate steps to contain any potentially adverse impact to their staff or to the environment. Hazmat 1 offers a wide variety of spill kits, each individually tailored to client specific needs. These kits typically range from custom steel lockers containing a comprehensive range of protective clothing and equipment, tools and various absorbant products, to compact emergency spill kits which are neatly stored in 240 litre Otto bins.

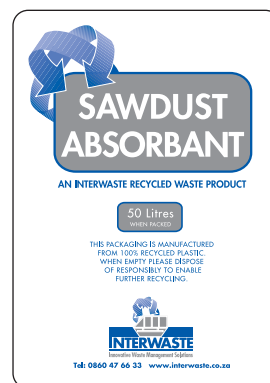

On-site training is given with all spill kits supplied and individual items are stocked to be re-supplied as they are consumed.

Interwaste also supplies a waste sawdust based absorbant material which is cost effective enough to use for daily clean-up situations. Prevention is better than a cure and many potential environmental disasters have been averted by the timeous application of pollution prevention measures.

Typically a kit could include:

- Spill absorbant material and containment booms
- Protective clothing and footwear
- Road cones and barrier tapes
- Brooms, squeegees and shovels, including special spark-free equipment for incidents where a specific fire risk exists
- Larger kits could include full chemical and splash suits and breathing apparatus.

The provision of efficient absorbent material is of high importance. Absorbants supplied by Interwaste are 100% organic materials available in various bales, bags and as booms. They are non-toxic and can, on average, absorb 8 times their own weight. Their ability to absorb and encapsulate hydrocarbons on contact makes them ideal for spills on land and on water. Correct use enhances bioremediation of hydrocarbons and can reduce disposal costs by up to 90%.
