

TUBIE FLUORESCESNT TUBE DESTRUCTION

The original Tubie is a manual pulveriser that crushes up to 300 tubes of various sizes and deposits the waste material into a single sealed drum. Interwaste will also collect the waste material for disposal and provide an empty drum on an exchange basis.

The Tubie 2 automated tube crusher is self contained, fully portable and incorporates an electric pulverising unit as well as a high power integrated vacuum system which ensures maximum safety during use.

DRUM DRAIN

Drum Drain is manufactured from durable 3mm thick virgin polyethylene that is available in all primary colours. The material is self-lubricating to ensure crack-free operation and has a shape retention memory.

It is light-weight and UV resistant. The flat funnel, with its lid, fits all standard 210 litre steel drums so that it cannot flip or dislodge during use. Acids, alkalis, in fact 99% of chemicals can be used safely through Drum Drain at temperatures of up to 150°C. Interwaste can also facilitate the eventual safe disposal of the waste fluids.
